Food utensils such as tablespoons must not be used for food purposes after use with insecticide. Teaspoons and measuring cups should not be used for food purposes after use with insecticide.

The amounts of this product listed in the above table are based on the total area being treated. The mound should be treated with sufficient force to break its apex and allow the insecticide to flow into the Ant tunnels. A four-foot diameter circle around the mound should also be treated. For best results, apply in cool weather (65 to 80˚F) with 1 to 2 gallons of water. The mound should be drenched with sufficient force to break its apex and allow the insecticide solution to flow into the Ant tunnels.

With 1 to 2 gallons of water. The mound should be treated with sufficient force to break its apex and allow the insecticide solution to flow into the Ant tunnels. A four-foot diameter circle around the mound should also be treated. For best results, apply in cool weather (65 to 80˚F) with 1 to 2 gallons of water. The mound should be drenched with sufficient force to break its apex and allow the insecticide solution to flow into the Ant tunnels.

Applications should be made during May and July to control the first and second generation of Black Turfgrass Ataenius adults, respectively. The May application should be timed to coincide with the full nymphal stadium of the first generation. Cutworms are active from March through August. A second application may be needed for adequate control. For best results, apply at night when cutworms are most active. Moth larvae are active from May through August. A second application may be needed for adequate control. For best results, apply at night when cutworms are most active. Moth larvae are active from May through August.

In the event of a weather-related chemical emergency contact the local support group for assistance. See back of bag for additional precautionary statements.

The application rates listed in the following table will provide excellent control of the respective pests under typical conditions. In New York State, this product may NOT be applied to any grass, or turf area within 100 feet of a water body (lake, pond, river, stream, wetland, or drainage ditch).

NOTE TO PHYSICIAN: This product is a pyrethroid. If large amounts have been ingested, milk, cream or other digestible fats and oils may increase absorption. Do not make spot applications. Treat the entire area where exposure to ticks may occur. Use higher application rates when treating areas with higher tick pressure. This product may be applied at up to 0.008 pounds a.i. (4 pounds of this product) per 1,000 sq. ft. per application on residential use sites (i.e., around private homes, apartment buildings, condominiums, non-agricultural outbuildings, non-commercial greenhouses, school grounds, and parks). Do not make applications during rain.

CAUTION

PRECAUTIONARY STATEMENTS: (Caution is intended to alert to the presence of a danger that requires the exercise of prudence and the avoiding or minimizing of the risk of injury. If you do not understand the label, read instructions on the product label or ask for help if you need it.)

FIRST AID

F ON SUN DUV CLOTHING: Take off contaminated clothing. Rinse skin immediately with water for 15 to 20 minutes. Call a poison control center or doctor for treatment advice.

If in eyes: Hold eye open and rinse slowly and gently with water for 15 to 20 minutes. Remove contact lenses, if present and easy to remove, after first 5 minutes. Continue rinsing eye(s) for at least 15 minutes. Call a poison control center or doctor for treatment advice.

In the event of a chemical or physical emergency contact the local support group for assistance. See back of bag for additional precautionary statements.

APPLICATION RATES

AROUND STRUCTURE

For best results, apply in cool weather (65 to 80˚F) with 1 to 2 gallons of water. The mound should be drenched with sufficient force to break its apex and allow the insecticide solution to flow into the Ant tunnels. A four-foot diameter circle around the mound should also be treated. For best results, apply in cool weather (65 to 80˚F) with 1 to 2 gallons of water. The mound should be drenched with sufficient force to break its apex and allow the insecticide solution to flow into the Ant tunnels.

These settings should be used as starting points when calibrating a spreader to achieve the desired application rate of this product. After calibration, the technician should regularly observe the amount of this product that is applied.

CONTAINER DISPOSAL: If empty:

WARRANTY DISCLAIMER

CONSEQUENCES, INCLUDING BUT NOT LIMITED TO INEFFECTIVENESS, MAY RESULT BECAUSE OF SUCH FACTORS AS THE PRESENCE OR ABSENCE OF OTHER MATERIALS USED IN COMBINATION WITH THE GOODS, OR THE TYPE, QUALITY, CONDITION, OR STATE OF THE USER BY WAY OF INDEMNIFICATION TO BUYER OR TO CUSTOMERS OF BUYER, IF ANY, OR FOR ANY DAMAGES OR SUMS OF MONEY, CLAIMS OR DEMANDS WHATSOEVER, RESULTING FROM OR BY REASON OF, OR RISING OUT OF THE USE, PURCHASE, OR SALE OF THE GOODS.

Note:

CAUTION:

Do not make spot applications. Treat the entire area where exposure to ticks may occur. Use higher application rates when treating areas with higher tick pressure. This product may be applied at up to 0.008 pounds a.i. (4 pounds of this product) per 1,000 sq. ft. per application on residential use sites (i.e., around private homes, apartment buildings, condominiums, non-agricultural outbuildings, non-commercial greenhouses, school grounds, and parks). Do not make applications during rain.
