BIG-K™

Foliar Nutrients

Big-K products are a line of liquid, water soluble, buffered, foliar nutrients specially designed to enable crops to reach their balanced nutritional status.

Big-K contains high levels of available nutrients and micronutrients for immediate foliar absorption and utilization by plants. They are designed for foliar application for immediate nutritional need and to eliminate the fixing or tying up of important nutrients – particularly phosphorus – in the soil.

The application of **Big-K** at the proper times will result in healthier crops. This means a greater retention of flowers and fruits, resulting in increased yields and higher quality. Our **Big-K** with a high potassium formulation is designed for the banana crop to meet the potassium nutritional requirement that is needed for increasing bunches, fruit numbers, and fruit size.

Big-K is recommended for use on Alfalfa, Banana, Corn, Cotton, Peanuts, Rice, Soybean, Sugarcane, and Wheat.

Benefits of Using Big-K

- Readily available nutrients
- Added micronutrients
- Easy foliar application
- Can be used with humic acids
- Choice of formulations
