Dissolve-It

Waste Digester & Odor Counteractant

**Aids in removal
of stubborn
bird droppings!**

A bio-chemical live enzyme formulation consisting of a synergistic blend of three selected *Bacillus* (germ eating) micro-organisms, special surfactants and a unique odor neutralization formula. When Dissolve-It is added to problem areas it efficiently eats away at bird droppings or other organic wastes, reducing the amount of solid waste and eliminating the odors. Dissolve-It aids in the clean up process by breaking down bird droppings and reducing the amount of build up while turning the matter into liquid form. When large amounts of droppings are present it is a good idea to use a germicide like Disinfect-It (also from Bird Barrier) to thoroughly cleanse the site after the waste has been removed.

Warning: Before beginning any type of waste removal program, make sure to wear the proper equipment such as protective coveralls and gloves, as well as respirators, face masks or other OSHA approval breathing apparatuses for working with hazardous waste.

**Professional Bird-Site
Clean-up Product**
Should be used with
Disinfect-It and Absorb-It

Product Properties:

Water Cas #007732-18-5
Nontoxic Detergent CAS #9016-45-9
Enzyme CAS #9000-85-5
Enzyme CAS #9014-01-1

1. Spray on treatment area using 1 part water and 1 part Dissolve-It. Thoroughly soak area so enzymes penetrate the problem area. The key to an effective job is to keep the treated material wet at all times. Enzymes will multiply faster in a moist environment which speeds up the rate of bio-degradation & decomposition.

2. Allow Dissolve-It's enzyme agents time to break down the solid waste. Time needed will depend on amount and consistency of problem area. As Dissolve-It begins to take effect, the area will begin to turn into a liquid substance.

3. When large amounts of waste are present, continue to soak the problem area so that the enzymes can continue to eat away at the waste. Given enough time, Dissolve-It will greatly reduce the build up of waste.

Tip: To help speed up the clean up process: Dampen problem area with Dissolve-It; this will help reduce the odor and loosen the waste. Then shovel or vacuum up the loose top layers of waste, leaving behind the hard packed waste. This remaining layer is where Dissolve-It is vital for easy removal and to deodorize at the same time. Absorb-It can be utilized in this stage to assist in absorbing some of the liquefied waste. After the waste is removed, the area should be immediately treated with Disinfect-It to cleanse the entire area from disease-causing bacteria.

4. When waste has reached a manageable form, clean up by either soaking up with Absorb-It (see instructions) or hose down area. After the waste is removed, the area should be immediately treated with Disinfect-It to cleanse the entire area from disease-causing bacteria.
Use the appropriate final clean up step for your situation.
