KILLS RATS, MICE & MEADOW VOLES*

Mold Resistant • Moisture Resistant

PEANUT FLAVORED

KEEP OUT OF REACH OF CHILDREN

CAUTION

See back panel for First Aid, additional precautionary statements, and Directions for Use.

ACTIVE INGREDIENT:
Diphacinone (CAS #82-86-6): .................. 0.005%
OTHER INGREDIENTS: ......................... 99.995%
TOTAL ........................................ 100.000%

*Not permitted for use against the following species in California: Cotton rat, Eastern harvest mouse, Golden mouse, Polynesian rat, Meadow vole, White-throated woodrat, Southern plains woodrat, and Mexican woodrat.

This product may only be used inside and within 100 feet of man-made structures.
PRECAUTIONARY STATEMENTS

Hazard to Humans and Domestic Animals

CAUTION: Harmful if swallowed or absorbed through the skin. Causes moderate eye irritation. Keep away from children, domestic animals and pets. Do not get in eyes, on skin, or on clothing. All handlers (including applicators) must wear long pants, shoes, socks, and waterproof gloves. Any person who retrieves carcasses or unused bait following application of this product must wear waterproof gloves.

NOTE TO PHYSICIAN

If swallowed, this material may reduce the ability of the blood and cause bleeding. If ingested, administer Vitamin K1, intramuscularly or orally. Repeat as necessary based on monitoring of prothrombin times.

User Safety Requirements

Follow manufacturer’s instruction for cleaning/maintaining PPE. If no such instructions for washables exist, use detergent and hot water. Keep and wash PPE separately from other laundry. Remove PPE immediately after handling this product. Wash the outside of gloves before removing as soon as possible, wash hands thoroughly after applying bait and before eating, drinking, chewing gum, using tobacco or using the toilet and change into clean clothing.

ENVIRONMENTAL HAZARDS

This product is toxic to mammals and birds. Dogs and other predatory and scavenging mammals and birds might be poisoned if they feed upon animals that have eaten this bait. Do not apply directly to water or to areas where surface water is present or to intertidal areas below the mean high water mark. Runoff also may be hazardous to aquatic organisms in water adjacent to treated areas. Do not contaminate water when disposing of equipment wash water or rinsate.

APPLICATION DIRECTIONS:

Rats:

Do not apply when feeding consists of fresh or dried food.

In infested areas. Space placements at 8 to 12 foot intervals. Two to 16 blocks per manhole, depending upon the apparent intensity of rat activity. Maintain an uninterrupted supply of fresh bait for at least 10 days or until there no longer signs of new feeding by rats.

Anticoagulant Diphacinone:

For animals ingesting bait and/or showing poisoning signs (bleeding or elevated prothrombin times), give Vitamin K1.

USDA REG. NO.: 12455-80

DIRECTIONS FOR USE (Continued from other panel)

- Bait stations are mandatory for outdoor, above-ground use. Tamper-resistant bait stations must be used wherever children, pets, non-target mammals, or birds may have access to the bait placement location.

- Use Restrictions: This product may only be used to control the following rodent pests in and around man-made structures: House mouse (Mus musculus), Norway rat (Rattus norvegicus), Roof rat (Rattus rattus), Cotton rats* (Sigmodon hispidus), Eastern harvest mouse* (Reithrodontomys humulis), Golden mouse* (Ochotryomys rutilus), Polyneisan rat* (Rattus exulans), Meadow vole* (Microtus pennsylvanicus), White-throated woodrat* (Neotoma albigula), Southern plains woodrat* (Neotoma microplus), and Mexican woodrat* (Neotoma mexicana). This product must be used in and within 100 feet of man-made structures constructed in a manner so as to be vulnerable to commercial rodent invasions and/or to harboring or attracting rodent infestations. Examples of such structures include homes and other permanent or temporary residencies, food processing facilities, industrial and commercial buildings, trash receptacles, agricultural and public buildings, transport vehicles (ships, trains, aircraft), docks and port or terminal buildings and related structures associated with these sites. Fence and perimeter baiting, beyond 100 feet from a structure as defined above, is prohibited. This product must not be applied directly to food or feed crops.

- Burrow baiting with DITRAC® All-Weather Blox® is prohibited.

- Do not place near or inside ventilation duct openings. Do not contaminate water, food, feedstuffs, food or feed handling equipment, or milk or meat handling equipment or surfaces that come into direct contact with food. When used in USDA inspected facilities, this product must be applied in tamper-resistant bait stations. Do not broadcast bait.

- Do not sell this product in individual containers holding less than 4 pounds of bait.

- Selection of Treatment Areas: Determine areas where rats, mice or meadow voles will most likely find and consume the bait. Generally, these areas are along walls, by gnawed openings, in corners and concealed places, between floors and walls, or in locations where rodents or their signs have been seen. Protect bait from rain and snow. Remove as much alternative food as possible.

- Application Directions:

- Rats: Apply 3 to 16 one-ounce block bait per placement in infested areas. Space placements at intervals of 15 to 30 feet. Maintain a constant supply of fresh bait for 10 days or until there no longer signs of new feeding by rats.

- When baiting sewers, securely attach one end of wire to each block and the other end to a stationary structure. If bottom is not present, suspend each block a few inches above the high water mark or secure block on a board supported by opposing steps of the ladder. Securing blocks in this manner will reduce chances that they will be removed by rats or water. Use 3 to 16 blocks per manhole, depending upon the apparent intensity of rat activity. Maintain an uninterrupted supply of fresh bait for at least 10 days or until there no signs of new feeding by rats.

- Anticoagulant Diphacinone:

- For animals ingesting bait and/or showing signs of poisoning, give Vitamin K1 intramuscularly or orally. Repeat as necessary based on monitoring of prothrombin times.

- For a continuous infestation, set up permanent bait stations and replenish bait as needed.

- If reinfestation does occur, repeat treatment. For a continuous infestation, set up permanent bait stations and replenish bait as needed.

- *Not permitted for use against the following species in California: Cotton rat, Eastern harvest mouse, Golden mouse, Polyneisan rat, Meadow vole, White-throated woodrat, Southern plains woodrat, and Mexican woodrat.

- For other species, see directions for use.

- Do not sell this product in individual containers holding less than 4 pounds of bait.

- Selection of Treatment Areas: Determine areas where rats, mice or meadow voles will most likely find and consume the bait. Generally, these areas are along walls, by gnawed openings, in corners and concealed places, between floors and walls, or in locations where rodents or their signs have been seen. Protect bait from rain and snow. Remove as much alternative food as possible.

- Application Directions:

- Rats: Apply 3 to 16 one-ounce block bait per placement in infested areas. Space placements at intervals of 15 to 30 feet. Maintain a constant supply of fresh bait for 10 days or until there no longer signs of new feeding by rats.

- When baiting sewers, securely attach one end of wire to each block and the other end to a stationary structure such as the bottom step of a manhole ladder or a sewer grate. Allow just enough wire for the block to rest on manhole benching. If benching is not present, suspend each block a few inches above the high water mark or secure block on a board supported by opposing steps of the ladder. Securing blocks in this manner will reduce chances that they will be removed by rats or water. Use 3 to 16 blocks per manhole, depending upon the apparent intensity of rat activity. Maintain an uninterrupted supply of fresh bait for at least 10 days or until there no signs of new feeding by rats.

- Anticoagulant Diphacinone:

- For animals ingesting bait and/or showing signs of poisoning, give Vitamin K1 intramuscularly or orally. Repeat as necessary based on monitoring of prothrombin times.

- For a continuous infestation, set up permanent bait stations and replenish bait as needed.

- If reinfestation does occur, repeat treatment. For a continuous infestation, set up permanent bait stations and replenish bait as needed.

- *Not permitted for use against the following species in California: Cotton rat, Eastern harvest mouse, Golden mouse, Polyneisan rat, Meadow vole, White-throated woodrat, Southern plains woodrat, and Mexican woodrat.
