General advice
When possible, have the product container or label with you when calling a poison control center or doctor or going for treatment.

Inhalation, dermal absorption or ingestion of this product may result in systemic intoxication due to inhibition of the enzyme cholinesterase. Symptoms of poisoning may only appear several hours later.

Inhalation
If person is not breathing, call 911 or an ambulance, then give artificial respiration, preferably mouth-to-mouth if possible. Call a physician or poison control center immediately. Move to fresh air. Keep patient warm and at rest.

Skin contact
Wash off immediately with plenty of water for at least 15 minutes. Take off contaminated clothing and shoes immediately. Call a physician or poison control center immediately.

Most important symptoms and effects, both acute and delayed

Symptoms
This product causes reversible cholinesterase inhibition without long term effects., Repeated overexposure may cause more severe cholinesterase inhibition with more pronounced symptoms.

The symptoms of cholinesterase inhibition include:
Nausea, Salivation, Lachrymation, Blurred vision, Constriction of pupils
Indication of any immediate medical attention and special treatment needed
Risks
This product contains an anticholinesterase compound. Do not use if under medical advice not to work with such compounds.

Treatment
The following antidotes are generally accepted: atropin and oximes.
