STOP IGUANA DAMAGE!

IGUANA SCRAM™ PROFESSIONAL

GRANULAR REPELLENT

- Works by offensive taste & smell to iguanas
- Stop plant & lawn damage
- Works in All Seasons
- All Natural & Environmentally Safe
- Won't harm animals, people or pets
- Easy to Apply ~ No Mixing

The green iguana is a herbivore that grazes on young vegetal shoots, hibiscus and other flowers, shrubs, trees, orchids, figs, mangos, berries, & tomatoes. Their feces is found in or around water (a backyard swimming pool is perfect). They breed and lay eggs often in great numbers. Their nest-burrowing digs up yards, undermines sidewalks, sea walls, and building foundations. The Florida Keys area where the endangered Miami Blue is struggling to re-colonize, the green iguana is bad news as they are threatening to drive the butterfly into extinction. Although the iguanas are too well established in Florida to be eradicated, Iguana Scram Professional can help control and exclude them on a local scale.

GENERAL APPLICATION: Flower beds, shrubs, gardens: Sprinkle or spread to form a border approx. 15-18 inches out from the edge of the bed with a 20-24 inch band of Iguana Scram. Apply using the scoop provided so it is visibly heavy enough to see. Sprinkle around tree bases to keep iguana's from climbing tree to get to vegetation.

For Excessive problems in high iguana density areas: Initial Application: Apply as above and add a second band **15 inches out from the first strip** around the bed and broadcast Iguana Scram Pro lightly throughout the inside of the bed. This will stop the problem and only a single band nearest the bed will be needed for maintenance applications going forward.

This newly formulated repellent is designed specifically to stop & then prevent damage caused by iguanas. It has been proven by landscapers and pest control operators to be both highly effective and long lasting.

8 lb. ITEM# 5910 Approx. Coverage: 2,400 sq. feet
