KEEP OUT OF REACH OF CHILDREN**

Mosquito Free®

Mosquito Free® is made with natural ingredients and can be used year round (southern states). Product does not cause discoloration. Mosquito Free® is not a larvicide and is intended to rid adult mosquitoes with proper use. Not for use on edible crops. Visit our website for frequently asked questions at www.gardengirlsrepellents.com.

Directions:

300 Gallon Truck Tanks: Fill tank half with water then add product to avoid foaming. Then add remaining water. Use entire bottle to make 300 gallons. Smaller tanks adjust accordingly at 12oz per 100 gallons. No more than 100 psi (pounds of pressure) to avoid drift. Use 25-40 gallons of RTU product per acre depending on saturation. See section below for further instructions.

Mist Blowers/3 Gallon Backpack Sprayers: Add 1 oz to make 3 gallons. Shake well. This bottle will make 108 gallons of RTU product when spraying with this method. We recommend spraying under shrubs, wood piles, leafy areas and anywhere on property where it is shaded and moist. Spray into trees up and under the leaves where mosquito hide during the day. Can also be sprayed directly on swing sets, patios and stone walls. For best results spray every 21-30 days. If infestation is severe, apply as needed.

Do not dilute more than recommended for initial or maintenance applications. You can use more product per gallon for heavily infested areas. This will lower your total gallon production. Allow up to 1 hour or more for drying time. Dispose empty container according to your states requirements for non-hazardous material. Product is hazardous to aquatic life. Do not spray into any body of water. Store in a cool dry location away from sunlight and heat source. Do not spray around active honeybee hives. We do not recommend mixing any product with Mosquito Free.

This product is not registered with US EPA. Garden Girls Repellents™ LLC represents that this product qualifies for 25(b) exemption under FIFRA.
