

SOLAR FLY TRAP INSTRUCTIONS

Prepare the Bait

- 1. To prepare bait, pour the yeast and the catalyst into a 1 gallon plastic jug (not included).
- 2. Slowly add a half gallon of warm water, cap and shake lightly to dissolve the bait.
- 3. Once dissolved, add more warm water to nearly fill the jug leaving a 2" space at top and mix thoroughly.
- 4. Place cap on loosely, allowing gasses to escape during fermentation.
- 5. After 2-3 days lid can be secured. Bait will take 7 days to ferment prior to use.
- 6. Keep bait away from children and pets

Solar Fly Trap with Lid Off

Add Bait Mixture to Trap

- Once fermented, pour the bait mixture through trap lid and through the inverted mesh cone into the bait bowl or lift the lid off the trap and pour through inverted mesh cone into the bait bowl.
- 2. Refill bait bowl as needed.

Package Contains:

- 1 Assembled Solar Fly Trap
- 1 Solar Fly Trap Bait packet containing yeast package & catalyst package (ammonia carbonate)
- 1 Instruction sheet

Placing The Trap

1. Place trap in direct sunlight

Solar Fly Trap

Components

- 2. If temperatures exceed 95° place the trap in partial or indirect sunlight
- 3. On rainy days, place plastic wrap over the lid and secure with string or a rubber band
- 4. Never use trap indoors

How Do They Work?

The trap, constructed of a light weight aluminum mesh and banding, is the size of a 12" diameter round hat box. Inside is an inverted cone and at the bottom is a suspended bait bowl. Flies are attracted to the bait but bypass it and move up the cone where they're trapped inside the chamber and dehydrated by the sun. When the trap is full of dead flies, it's time to empty the chamber.

Solar Fly Trap Tips

- 1. If legs or lid are slightly bent, they can easily be bent back into position
- 2. To clean, empty/dispose flies and hose trap off
- 3. Avoid splashing bait on clothing
- 4. Store mixed bait outdoors in a cool, dry area
- 5. Extra unmixed bait may be stored in refrigerator
- 6. For best results, add one tablespoon of bait to the bowl every day or every other day

Substitute Bait: Mix one beaten egg with a can of beer or soda and pour into bait bowl until about 1 quarter full. Once Solar Fly Trap bait has fermented, add to the substitute bait mixture in bowl.
