For indoor or outdoor use as either a crack and crevice injection or spot treatment. Use this product with the supplied actuator or injection tube; this product can also be used in aerosol application equipment.

Application Restrictions:
- Do not contact treated surfaces until dry. People and pets may re-enter after treated areas are dry.
- Do not apply in food/feed areas of food and feed handling establishments.
- Do not apply in classrooms, hospital, and/or nursing home rooms while they are occupied.
- Do not treat areas of furniture or upholstery where prolonged contact with humans will occur.
- Do not spray bed lines or other materials which come in direct contact with occupant of the bed.
- In the home, cover or thoroughly wash all food processing surfaces and utensils following treatment. Cover exposed food or remove from area being treated.
- Do not apply directly to interposing horizontal surfaces such as sidewalks, driveways, and patios except as a spot or crack and crevice treatment. During application, do not permit insects to enter or run off into storm drains, drainage gutters, or surface waters.
- All outdoor applications must be limited to spot or crack and crevice treatments only.
- Do not apply this product, by any application method, to linoleum, basement, or other Tisia species.

When to apply:
- Apply when pests are seen or found. Reapply every 7 to 10 days until infestation is eliminated.

Crack and crevice treatment:
- Inject into cracks and crevices or void spaces where insects may be harboring, living, and breeding. Place injector tip into cracks, crevices, holes, and other small openings. In light infestations or maintenance treatments, make the injection tube along cracks and crevices at the rate of 1 linear foot per second. For heavy infestations or clean-out treatments, move the injection tube along cracks and crevices at the rate of 6 inches per second. If enclosed void spaces, after calculating the void’s cubic area, apply at a rate of 2 seconds per cubic feet. Several holes may be required in long-running voids.

Spot treatment:
- Hold nozzle between 12 to 18 inches from the surface to be treated. Release product at a rate of 4 seconds per 2 square feet. Each spot must not exceed 2 square feet.
- Growers, indoors, treat around known or suspected pest harborage and entry points, such as around water pipes and other utility lines, doors, windows, behind baseboards and molding, behind cabinetry and in cracks and crevices in cabinets, drawers and shelves, behind and behind refrigerators, washing machines, and stoves. Make spot treatments in corners, to flooring beneath furniture, in closets and storage areas.

Outdoors, apply as a crack and crevice or spot treatment to surfaces on buildings, porches, patios, and other structures, openings around doors and windows, eaves and attic vents, utility entry points, weep holes, and other areas where ants are found and access to the structure is provided by long running voids. When infested areas are treated, apply as spot treatment only to the insecticide active ingredients and all of which are beyond the control of Bayer CropScience LP. Any and all losses, injuries or damages resulting from the use or handling of any product, whether caused by the fault or neglect of Bayer CropScience LP or its employees, agents, or assigns are the sole responsibility of the user or buyer.
