APPLICATION USE INFORMATION
(Continued)

CANNABIS DISEASES	RATE FL OZ PER ACRE	APPLICATION INSTRUCTIONS
Powdery Mildew (Golovinomyces)	24-48 Fluid Ounces per acre 0.55-1.10 Fluid ounces per 1000 sq ft	Begin applications at the start of vining or at first indication of disease. Repeat applications can be made at not less than 7-day intervals.

RESTRICTIONS:
Applications can be made up to and including the day of harvest.

SPRAY DRIFT

SENSITIVE AREAS: Apply ANY fungicide only when the potential for drift to adjacent sensitive areas (e.g., residential areas, bodies of water, known habitats for threatened or endangered species, non-target crops) is minimal (e.g., when wind is blowing away from the sensitive areas).

Avoiding spray drift at the application site is the responsibility of the applicator. The interaction of many equipment and weather-related factors determine the potential for spray drift. The applicator and the grower are responsible for considering all these factors when making decisions. The following drift management requirements must be followed to avoid off-target drift movement from aerial applications to agricultural field crops. These requirements **do not** apply to forestry applications, public health uses or to applications using dry formulation.
